

THINKING CRITICALLY IN CONTEXT

November 17, 2010 (1-Day Workshop)

Creating Learning Activities that Target the Improvement of Students' Critical Thinking Skills, within Disciplinary Contexts

Critical Thinking: the ability to use and manage intelligence and skills appropriately for tasks or goals, across multiple domains of knowledge (cognitive, social, and affective domains).

This one-day workshop will allow participants the opportunity to create critical thinking activities within the context of their own discipline. The activities created will all require the creation, communication, and transfer of knowledge. Participants should each bring a learning activity (or even an idea for a learning activity) to work on during the institute.

Focus Areas:

Facilitator:

Dr. Daniel K. Apple is the President of Pacific Crest, an educational consultancy that has provided development workshops for more than 12,000 educators.

Registration:
