

What Do You Already Know? *Tapping into your existing knowledge*

1. What is the largest value the probability of an event can assume?
2. What is the smallest value the probability of an event can assume?
3. What is always true for the sum of probabilities for all events in a sample space?
4. What are some probability distributions that you know of?
5. Of these distributions, what characteristics can you share about them?
