

DESIGNING & IMPLEMENTING PERFORMANCE MEASURES

Strengthen your understanding of performance, measurement, and rubrics, as you practice using a methodology for designing performance measures.

ONLINE January 6 & 7 (8 am–5 pm CST)

By clearly defining a skill or process and identifying the criteria that have the most impact on performance of that skill or process, it is possible to create a **performance measure** (rubric) for measuring performance. It is only through careful attention to both the design and application of performance measures that we can meaningfully and accurately assess (grow) and evaluate (judge) the performance of learners and growers.

Participant Benefits:

Appreciate the relationship between performance, criteria, and measurement.

Learn to apply a methodology for creating performance measures (holistic & analytic rubrics).

Learn to write meaningful performance criteria.

Explore the issues involved in implementing rubrics.

Facilitator:

Dr. Daniel K. Apple is the President of Pacific Crest, an educational consultancy that has provided development workshops for more than 20,000 educators.
